

Thanapat Aupprathumwipanon

Software Engineer · Full-Stack Developer

Bangkok, Thailand | +66 99-009-0809 | thanapat.aupp@gmail.com | github.com/miramsalp | personal-website-miramsalp.vercel.app

Computer Engineering student at Chulalongkorn University shipping production full-stack systems in React, NestJS and TypeScript to thousands of real users, and Python/FastAPI services putting LLM retrieval behind a government API contract.

Education

B.Eng. Computer Engineering, Chulalongkorn University — *expected May 2027, GPA 3.52*

Experience

Software Engineer Intern — Skooldio Feb – Jul 2026

Wise Mentoring Ship — cross-university mentorship platform · React, NestJS, TypeScript

- Delivered end-to-end features for a platform now serving **1,000+ mentors and mentees**: registration, mentee-request and mentor-handling logic, dashboard, explore pages and the admin back-office.
- Authored the data-migration plan and scripts for the new schema, applied clean architecture (DTOs, Entities, Use Cases) with Swagger docs, set up CI/CD, and integrated LINE OA and Flex messages with GCP Cloud Tasks for async notifications.

Software Engineer (Part-time) — Wise Aug 2026 – Present

Wise Mentoring Ship — continued ownership · React, NestJS, TypeScript

- Retained directly by Wise after the Skooldio engagement, to keep owning the backend of the platform built during it.
- Ship new API and back-office features and resolve production issues against a live user base, extending into the React front end when a change spans the stack.

Frontend Developer — ISD, Chulalongkorn University Jul 2026

Student-organization registration platforms — First Date & RubpuenKaomai 2026 · React

- Built the registration flow, landing page and edit-profile UI and integrated the APIs behind them, for freshman-welcome events used by **5,000+ students** at peak sign-up.

Projects

RAG-GIS Heritage Impact System — capstone project

A retrieval-augmented API turning GIS impact analyses into Thai heritage-impact reports for ONEP, a government agency. · FastAPI · Vector search · SSE

- Contributed the `/analysis` endpoint end to end — schemas, controller, report assembly, retrieval query — plus SSE token streaming for the chat API.
- Assembled site counts, category breakdowns and ONEP's own legal citations deterministically, leaving the model only a closing paragraph, so figures and references cannot drift under hallucination.
- Shaped failure handling to the caller's retry contract — a 100s budget inside their 120s disconnect window, 5xx on empty output — so an incomplete report is retryable, not a silent success.

Tax Tracker

A capital-gains tax calculator for Thai investors trading foreign equities. · TypeScript · Vite · In-browser PDF parsing

- Parses broker confirmation notes in the browser and computes FIFO capital gains per security, cross-checked against monthly statements.
- No server or database, and a CSP locked to `connect-src 'self'` so trade data never leaves the machine; rejects unrecognised documents rather than guess at a figure that feeds a tax return.

Agaya

A full-stack middleman e-commerce platform connecting vendors and customers. · Full-stack · Stripe · Cloudinary

- Team Lead — ran Agile sprints and oversaw end-to-end delivery; integrated Stripe for payments and Cloudinary for product-image storage.

Skills

Languages	TypeScript, Python, JavaScript, C++
Frontend	React, Tailwind CSS, Vite
Backend & Data	NestJS, FastAPI, Node.js, PostgreSQL, Redis, RAG
Infrastructure	GCP, AWS, Docker, GitHub Actions
